

CC Lab 2008

3rd Python homework assignment

Homework Problem #1:

Write a program that uses each of the following control types:

1. if
2. else and elif
3. for
4. while
5. break
6. continue
7. at least 5 shorthand operators

Homework Problem #2:

Write a Python module that contains at least five functions. Two or more of the functions should take multiple arguments. Two or more of the functions should return multiple arguments. Each function should handle a different type of data:

1. 3D List
2. Tuple
3. Character string
4. Integer
5. File

Homework Problem #3:

Write a program that calls (using dot notation) and uses all five functions defined in the module you wrote for Problem #2.
